## **4<sup>th</sup> Dimension Search & Query Suite**

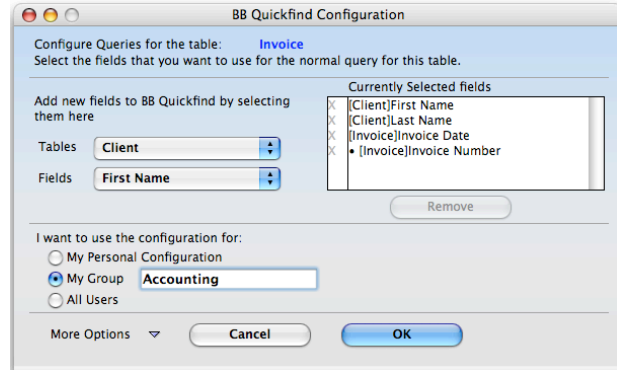

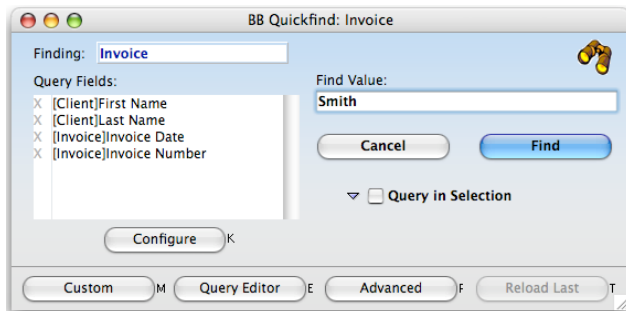

*The Ultimate Query Experience for 4<sup>th</sup> Dimension*  
By Business Brothers Inc.  
[WWW.BBSP.COM](http://WWW.BBSP.COM)

BBFind is a component based search & query suite. BBFind is easy to install into your database, and is highly customizable to unusual database situations. Novices and experts will both enjoy working with BBFind.

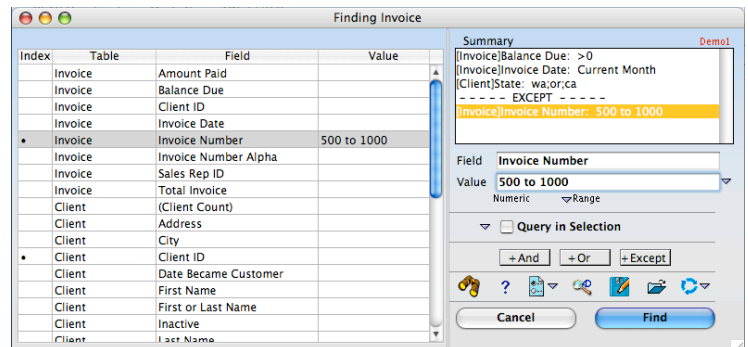

### **BB Quickfind**

- User or Designer configurable
- Configure multiple fields even across related tables
- Very simple user interface: once configured you just type a value and hit Enter
- Optimized for speed
- Configurable by individual user, user group, or all users

### **BB Advanced Find**

- Much easier to use than the 4D Query Editor
- Query on the current table and related tables (Many to One, One to Many & Many to Many)
- Relational queries are optimized for speed, often work many times faster than native 4D.
- Easy to enter various types of comparisons (Begins With, Greater than, Less than, etc.)
- Easy to do "Multi-Value" queries (query for multiple values on the same field at once)
- Easy to do "Range" searches (query A to Z, 1 to 100, etc)
- Various "Keywords" for date fields allow the user to save meaningful date-relative queries for repeated use
- Able to Save and Reload queries (saves directly to 4D Datafile for easier query sharing)
- Drop down list of all recent queries
- Supplies hints to assist the user in building their query
- Almost every feature can be done from either keyboard or mouse
- Database relationships can be dynamically programmatically configured
- Support for Virtual structure (fields that don't really exist)
- Support for 4D Subtables

### **Price:**

- \$99.00 for installation into one database, on one copy of stand-alone 4D or 4D Server
- \$349.00 for a one year unlimited deployments by one developer or development company.
